**Terms of Reference (TOR) of Junior National ICT Consultant (Intermittent) for
'Agro-Meteorological Information Systems Development Project (Component C of Bangladesh
Weather and Climate Services Regional Project' under Department of Agricultural Extension
Package No: AMISDP-SD-006**

A. Background

The South Asia Region (SAR) is highly prone to water related hazards such as floods, drought, tropical cyclones and thunderstorms that frequently cut across national borders. Despite the susceptibility of Bangladesh to weather and climate extremes, the country's hydro-meteorological information infrastructure over land, atmosphere and ocean, basic public weather services, forecasting, and multi hazard end-to end early warning systems remain weak and need to be strengthened.

In Bangladesh, agriculture contributes to almost 18% to the country's GDP and provides employment to about 60% of the people. Being primarily rain-fed, agricultural productivity of key crops such as rice, wheat, jute, tea, potatoes, and sugarcane are highly dependent on rainfall and weather patterns. There are approximately 30 key agro-ecological zones in the country. However, at present, neither BMD nor DAE have a systematic way of combining meteorological information and forecasts with agriculture related information to produce tailored Agro-Meteorological bulletins, information and products for farmers in the different agro-ecological zones that can help farmers make appropriate operational decisions about planting, harvesting, irrigation, adjusting cropping patterns and so forth at the farm level. DAE needs the development of an appropriate decision support system for agro-climatic information which would be of tremendous value in developing and communicating climate risk information to farmers. With support from the World Bank, the Government of Bangladesh (GOB) is implementing the Bangladesh Weather and Climate Services Regional Project (BWCSRP). The main objective of the project is to strengthen government capacity to deliver effective weather and climate information services and improve the quality and access to such services in priority sectors and communities. This objective will be achieved by strengthening the hydro-meteorological monitoring and forecasting, and service delivery related to water, agriculture and multi-hazard disaster risk management early warning systems.

The BWCSRP has four Components and include the following:

- Component A: Strengthening Meteorological Information Services implemented by the Bangladesh Meteorological Department (BMD);
- Component B: Strengthening Hydrological Information Services implemented by the Bangladesh Water Development Board (BWDB);
- Component C: Agro-Meteorological Information Systems Development implemented by the Department of Agricultural Extension (DAE); and
- Component D: Contingent Emergency Response Component

Each of the three main components has a Project Implementation Unit (PIU) which is responsible for implementing project activities. In addition, there is a small Project Coordination Unit or PCU (housed with the BWDB PIU), which is responsible for overall coordination and reporting.

B. Objectives

A full-time position is currently available for an experienced Junior IT Consultant. The knowledgeable IT Consultant to help project develop and integrate IT systems. He needs to resolving technical problems and provide training to Project officials and DAE officials accordingly. The consultant maintains all Hardware and software of the project.

C. Scope of Work

The consultant should have below knowledge and expertise:

- i. Network and Internet connectivity optimization, central management, bandwidth monitoring, etc.
- ii. To maintain integration of different software in BAMIS portal.
- iii. API integration, Website management, software upgradation, application management & Upgradation.
- iv. Datacenter maintenance and license upgradation;
- v. To know about the deep knowledge about Hardware and software management.
- vi. Ability to troubleshoot hardware, software and network problems
- vii. Experience with various operating systems and databases
- viii. Experience in project management
- ix. An analytical mind with problem-solving abilities
- x. A team player with excellent communication and presentation skills
- xi. Provide technical expertise, in procurement of equipment and installation of the same (end user equipment and/or LAN active equipment);
- xii. Develop and implement basic IT procedures for operating and maintenance of IT equipment.
- xiii. ICT capacity building of technical staff and user empowerment through regular ICT tips;
- xiv. Have knowledge about RAW PHP, MySQL, JavaScript, HTML5, CSS, jQuery.

D. Expected Outputs and Deliverables

- i. Daily monitoring 4051 ARGs data and synchronizing in BAMIS portal
- ii. Monitoring, reporting and solve the problem of 488 Kiosks.
- iii. Trained DAE officials to maintain Project ICT equipment.
- iv. Provide assistance with technical issues
- v. Optimized network infrastructure, datacenter and ICT management;
- vi. Monitoring and input data for visualize LED outdoor displays.
- vii. Comprehensive handover notes with clear recommendations for further/future improvements;

E. Qualifications and experience Recruitment Qualifications

Education:	Master's Degree in Information Technology, mathematics or equivalent field. MSc/MBA in business will be a plus Professional certification (e.g., CompTIA A+) is an asset
Experience:	5 years of working experience in ICT areas.
Specific experience	Have knowledge about RAW PHP, MySQL, JavaScript, HTML5, CSS, jQuery and API integration, Website management, software upgradation, application management & Upgradation.
