**Terms of Reference (TOR) for Accounting software management consultant (Intermittent) for  
'Agro-Meteorological Information Systems Development Project (Component C of Bangladesh  
Weather and Climate Services Regional Project), Department of Agricultural Extension under  
Package No: AMISDP-SD-008**

**A. Background**

The South Asia Region (SAR) is highly prone to water related hazards such as floods, drought, tropical cyclones and thunderstorms that frequently cut across national borders. Despite the susceptibility of Bangladesh to weather and climate extremes, the country's hydro-meteorological information infrastructure over land, atmosphere and ocean, basic public weather services, forecasting, and multi hazard end-to end early warning systems remain weak and need to be strengthened.

In Bangladesh, agriculture contributes to almost 18% to the country's GDP and provides employment to about 60% of the people. Being primarily rain-fed, agricultural productivity of key crops such as rice, wheat, jute, tea, potatoes, and sugarcane are highly dependent on rainfall and weather patterns. There are approximately 30 key agro-ecological zones in the country. However, at present, neither BMD nor DAE have a systematic way of combining meteorological information and forecasts with agriculture related information to produce tailored Agro-Meteorological bulletins, information and products for farmers in the different agro-ecological zones that can help farmers make appropriate operational decisions about planting, harvesting, irrigation, adjusting cropping patterns and so forth at the farm level. DAE needs the development of an appropriate decision support system for agro-climatic information which would be of tremendous value in developing and communicating climate risk information to farmers. With support from the World Bank, the Government of Bangladesh (GOB) is implementing the Bangladesh Weather and Climate Services Regional Project (BWCSRP). The main objective of the project is to strengthen government capacity to deliver effective weather and climate information services and improve the quality and access to such services in priority sectors and communities. This objective will be achieved by strengthening the hydro-meteorological monitoring and forecasting, and service delivery related to water, agriculture and multi-hazard disaster risk management early warning systems.

The BWCSRP has four Components and include the following:

- Component A: Strengthening Meteorological Information Services implemented by the Bangladesh Meteorological Department (BMD);
- Component B: Strengthening Hydrological Information Services implemented by the Bangladesh Water Development Board (BWDB);
- Component C: Agro-Meteorological Information Systems Development implemented by the Department of Agricultural Extension (DAE); and
- Component D: Contingent Emergency Response Component

Each of the three main components has a Project Implementation Unit (PIU) which is responsible for implementing project activities. In addition, there is a small Project Coordination Unit or PCU (housed with the BWDB PIU), which is responsible for overall coordination and reporting.

**B. Objectives**

A full-time position is currently available for an experienced Junior Accounting software management consultant. The knowledgeable accounting software management consultant to help project develop and integrate IT systems. He needs to resolving technical problems, upgrading existing accounting software and provide training to Project officials and DAE officials accordingly.
