

NATIONAL AGROMETEOROLOGICAL ADVISORY SERVICE BULLETIN

**06 July 2022 (WEDNESDAY)
[FOR THE PERIOD 06.07.2022 – 10.07.2022]**

DISCLAIMER

Under the Agro-meteorological Information System Development Project, Agromet Advisory Service Bulletins at National & Sixty Four (64) districts have been prepared on experimental basis. These bulletins are being displayed through the website of Department of Agricultural Extension for valuable comments/ suggestions from all concerned.

Special Agromet Advisories for CORONA virus (COVID-19) transmission in Bangladesh

Agromet Advisories

Farmers and all other farm managements are advised to follow the guidelines of Government of Bangladesh to avoid infection and social transmission of CORONA virus (COVID-19). Precautions and safety measures should be taken up to prevent the Carona virus spread. Simple measures include social distancing, maintaining personal hygiene by washing hands with soap, wearing of face mask, drink hot water, stay at home and cleaning of implements and machinery. Farmers should not work in a group; consult with a doctor in case of any symptom. Please stay at home does not visit the field until it is very necessary.

Salient Weather Conditions & Forecast

As per the weather forecast of Bangladesh Meteorological Department (BMD) during next 24 hours' Light to moderate rain/thunder showers accompanied by temporary gusty wind is likely to occur at many places over Dhaka, Mymensingh, Khulna, Barishal, Chattogram & Sylhet divisions and at a few places over Rangpur & Rajshahi divisions with moderately heavy to heavy falls at places over the country. Mild heat wave is sweeping over Rangpur division and the district of Rajshahi and it may abate from some places. Day temperature may fall slightly and night temperature may remain nearly unchanged over the country. As per the outlook issued by BMD for next 72 hours Rainfall activity may continue. During last four days, light to very heavy rainfall occurred most of the districts over the country and as per the quantitative medium range weather forecast; there is a possibility of rainfall most of the districts in the country during next five days. Detail Agromet advisory are given below.

Agromet advisories for flood prone districts:

1. Drain out excess water from the fields after floods
2. In heavily flood affected areas, select high lands for raising of community nursery with short duration HYV rice varieties. After receding of flood water, farmers may undertake transplanting of the same.
3. If there is total damage of seedlings or rice crop in the main field, undertake late and staggered planting with the old seedlings of the varieties if the field is heavily damaged.
4. In partially affected fields, drain out excess water from rice field and apply 1/3rd N₂ + 50% K as top dressing if the crop is at tillering stage.
5. Undertake direct seeding of rice with the photoinsensitive short duration variety if crop is damaged due to flood.
6. If the seeds are washed away by floods, make alternate arrangement of seeds.
7. Apply excess N fertilizer to the flood affected crops after receding of flood water.
8. Don't allow waterlogging for long, as it leads to rotting and development of diseases.
9. Keep cattle / animals in elevated place and in the shed and ensure their safety.
10. Provide clean drinking water to animals.
11. Transfer the fish from the flooded pond to a safe pond
12. Surround the four banks of the pond or water body with a net.

Agromet advisories for other districts:

Aus Paddy

- Maintain in 3-4 inches water level at recovery to tillering stages.
- Inspect & monitor disease-pest e.g blast, rice bug, stem borers and others and take appropriate plant protection measures
- After decrease in water level from aus paddy field, apply potash fertilizer as top dress by filling gap after 5-7 days and also urea fertilizer after 3-5 days. Urea fertilizer should not be applied if the paddy is in early tillering stage. After 5-7 days, if necessary, urea fertilizer should be applied by breaking the tillers and filling the gap. At this time, it is better to use additional 5 kg of potash fertilizer per bigha in all types of aus paddy fields.
- If the population of Thrips and Green Leaf Hopper exceeds 25%, apply Malathion group insecticide at the rate of 1ml/1 litre of water.
- All the plant protection measures should be taken up after the current spell of rainfall.

Aman Paddy

- Advise for preparation of seeded for Aman paddy in *kharif season*.
- Start sowing of dry seeded long duration paddy after proper tillage operation like ploughing, weeding etc.
- Before sowing seed should be treated by Diethane M-45 properly
- Farmers are advised to practice Dapog method for raising nursery bed.
- Community based rice nursery may be raised to avoid loss of nursery due to heavy rainfall & flooding.

(Kharif 1)

- Postpone harvesting of matured cobs of maize. At the time of grain filling and maturity stage birds damage the maize cobs. Hence, set up a scarecrow dressed in light flowing clothes that may help in avoiding birds attack in maize crop. Also attach strips of aluminum foil to the scarecrow to increase the reflection of sunlight so as to restrict the bird infestation
- To control Fall of Army worm in maize, manual destruction of egg masses and caterpillars may be done. Pheromone traps @ 4/ha for monitoring and 10/ ha for mass trapping of adult insects may be done. Spray Emamectin Benzoate 5% SG @6/15 litre water if infestation is above ETL.
- All the plant protection measure should be taken after the current spell of rainfall.

Groundnut

- Drain out excess water, if any from the land.
- Harvest the matured crop on non-rainy days.

- Monitor the incidences of pests (hairy caterpillar, jassid, thrips, leaf miner, spodoptera & termite) & diseases (leaf spot/tikka disease, leaf rust, foot rot/stem rot, collar rot, bud necrosis) and if noticed, take appropriate preventive measure.
- Prevailing weather condition are favorable for tikka leafspot in groundnut. To control spray with hexaconazol @2ml. or carbendazim @1 g. per litre of water.
- All the plant protection measure should be taken after the current spell of rainfall.

Vegetables

- Hand pollination is effective for more production in case of tassel gourd and pointed gourd. Moreover, advised to cut aged leaves and continue others intercultural operations in vegetables land.
- Wash away sticky mud from base and stems of vegetable plants by spraying fresh water; to prevent rotting, spray Copper hydroxide or copper oxychloride@4g per litre of water. Staking of bamboo should be provided to crops like tomato, chilli and brinjal for better support.
- Arrange for adequate drainage to avoid water stagnation in the crop fields. Drain out excess water from the fields. Avoid irrigation, intercultural operation and application of plant protection measures and fertilizers to the standing crops. Harvest the matured crop immediately and store the harvested products at safe places.
- All the plant protection measure should be taken after the current spell of rainfall.

Horticulture

- Weather is congenial for sigatoka leaf spot disease in banana; cut and remove all severely affected leaves and spray Propiconazol 1ml/ litre of water. Weather is congenial for burrowing nematode in banana; apply neem cake (1 kg/plant) at the time of planting to reduce the pest population. Store the harvested banana bunches in dry places to prevent disease incidence due to rainfall.
- Provide mechanical support to banana, young fruit plants and vegetables and carry out propping up in sugarcane to prevent the crops from lodging due to strong winds. Keep harvested produce at safer places. Keep cattle/goats indoor during thunderstorm/dust storm.
- Weather is congenial for bud rot disease in coconut; spray 1% Bordeaux mixture on the spindle leaf and crown of palms. Make provisions for small drains at required interval in the orchards to drain out excess water.
- All the plant protection measure should be taken after the current spell of rainfall.

Jute:

- Keep the jute land weed free by weeding and uproot comparatively under growth plant during the time.
- There is a chance of incidences of Semilooper. Spray Imidocholoprid/Chlorocytrin/ Nitro @ 1ml/litre of water. Semilooper and mites may infest in drought and humid weather and so placing 10-12 bamboo sticks/ plant branch @33 decimal land for controlling insects as environment friendly way. Besides, inspect the land regularly.

- Drain out water, if any, immediately from jute field. Application of fertiliser to jute field should be avoided now.
- To protect capsularis jute crop (>4 ft tall) from lodging due high wind speed, the peripheral jute plants (round the field) need to be tied together by taking 4-5 jute plants in a consecutive manner.
- Monitor the pests and diseases incidences and take appropriate plant protection measure.
- After drying the jute land, undertake weeding operation with a hoe. In case of disease incidences, apply recommended fungicides.
- All the plant protection measure should be taken after the current spell of rainfall.

Betel vine:

- At Leaf growing stage the fencing and structure of betel vine garden broken due to “strong wind. Repair the structure as early as possible and if required took down the creeper from the structure.
- Wet the plant and the base soil with copper oxychloride solution --Spray 1% Bordeaux mixture at the base.
- Intercultural operations need to continued as others month.
- Hail storm and western storm may be possible at this time, so special care should be given for beetle leaves.
- All the plant protection measure should be taken after the current spell of rainfall.

Sugarcane:

- During the month, sugarcane plant. in grand growth stage
- Cultivated summer pulse crops, leafy vegetables need to be harvested in the sugarcane field as relay/inters cropping.
- In this time, stem rot and stem borer and others disease-pest may infest the crop and so inspect the land regularly and take appropriate plant protection measure.
- All the plant protection measure should be taken after the current spell of rainfall.

Livestock:

- Keep the cow house open
- Take appropriate measures to repel mosquitoes.
- Give the cattle plenty of clean water to drink.
- Feed raw grass to cattle.
- Vaccinate cattle regularly to prevent disease.

Poultry:

- Vaccinate chickens regularly to prevent disease.
- Keep the poultry house clean.

Fishery:

- Now is a good time to stock fish /prepare the pond
- Catch all the old fish from the ponds by drying or applying Rotenon (25 g / decimal / ft).
Apply 1 kg lime per cent after 2/3 days
- Apply fertilizer (urea 200 g/decimal, TSP 100 g/ decimal) 3/4 days after lime application.
- 3/4 days after application of fertilizer, when the water turns green, store the layered fish fry.

Realized Weather at different locations in the country

Rainfall for last 24 hours (till 06 AM on 06 July 2022) and maximum temperature on 05 July and minimum temperature on 06 July 2022 is given below:

Highlights:

- Country average bright sunshine hour was 4.64 hours per day during last week.
- Country average free water loss during the previous week was 3.41 mm per day.

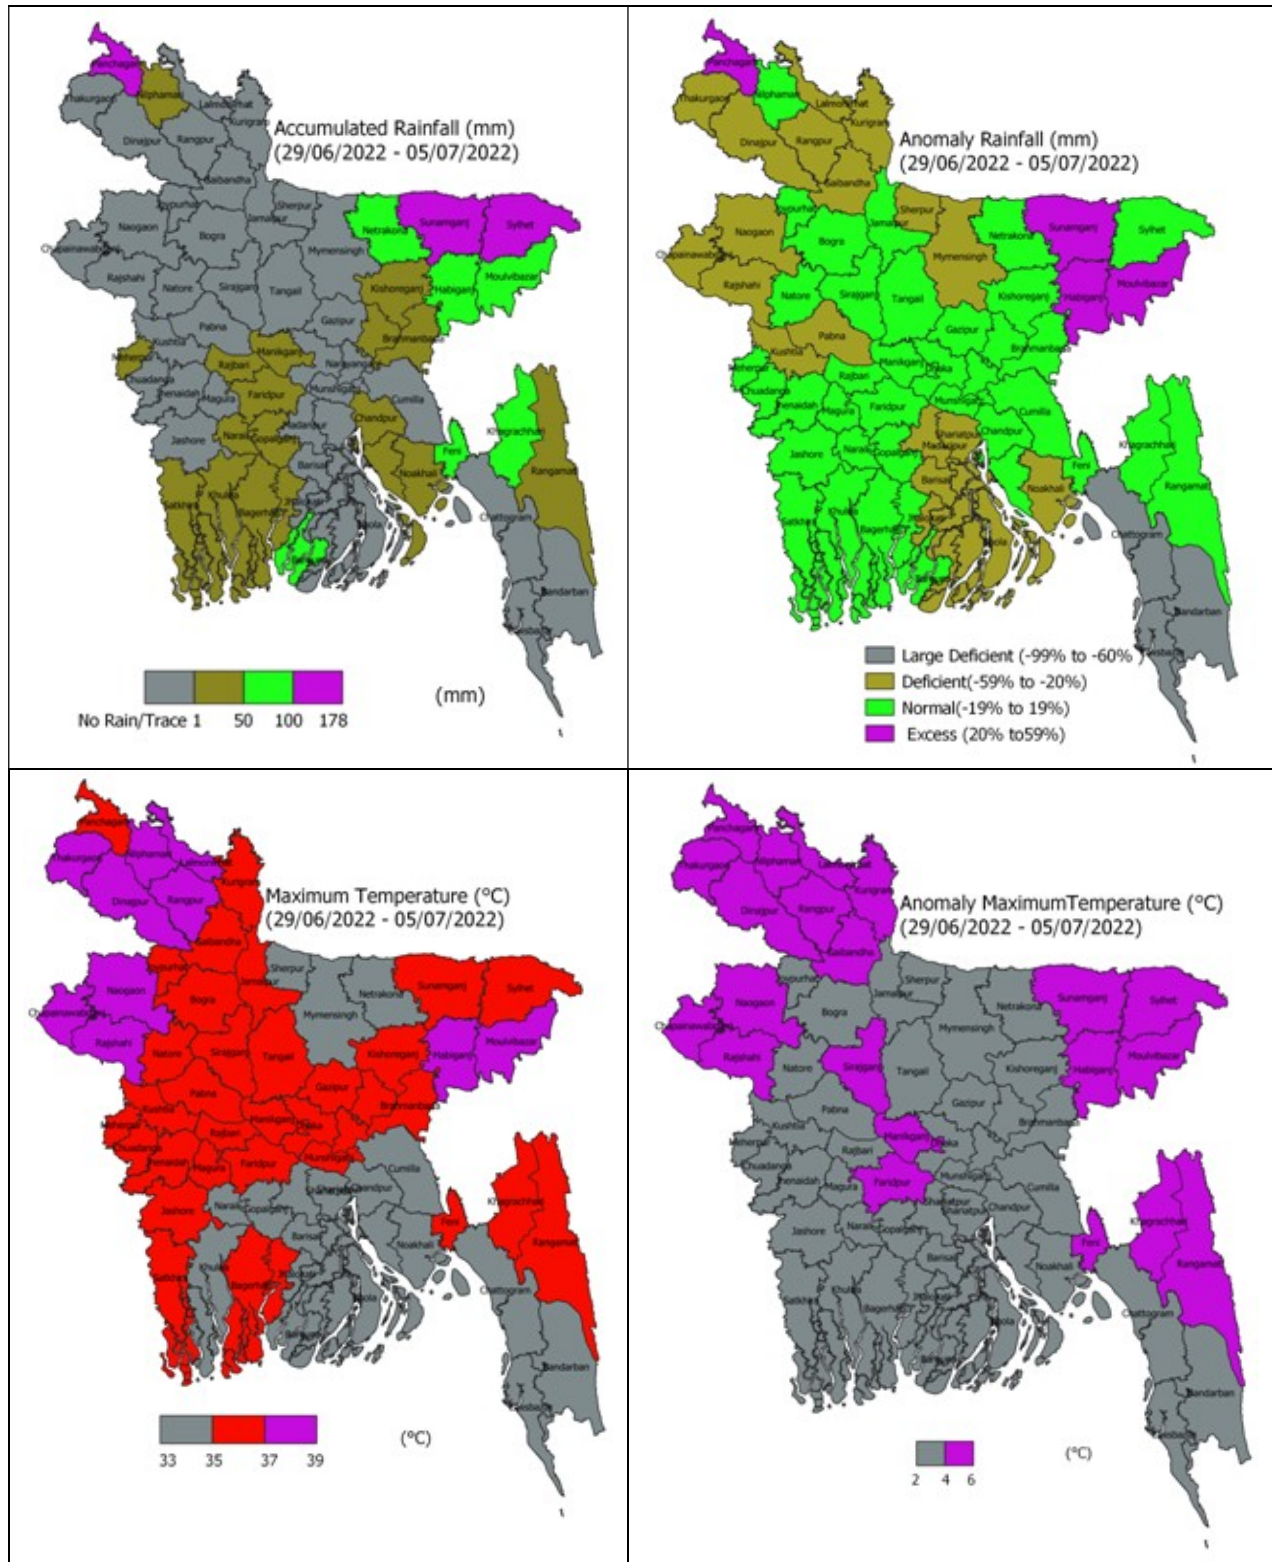

Weather Forecast Valid for 24 Hours commencing 06 PM Today:

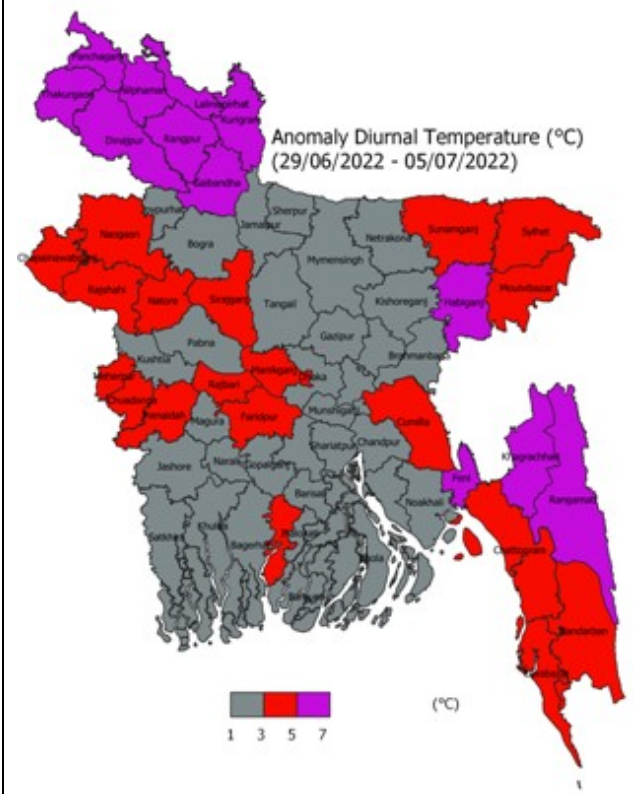

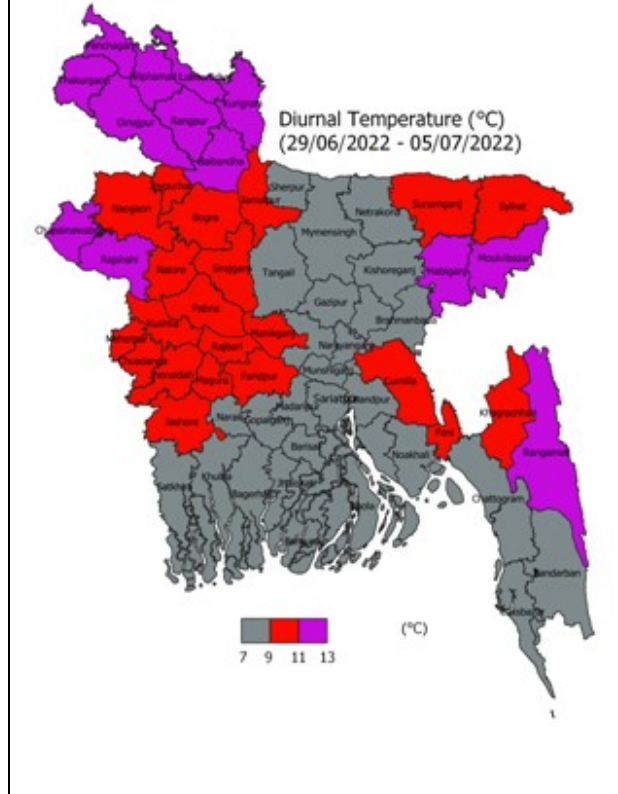

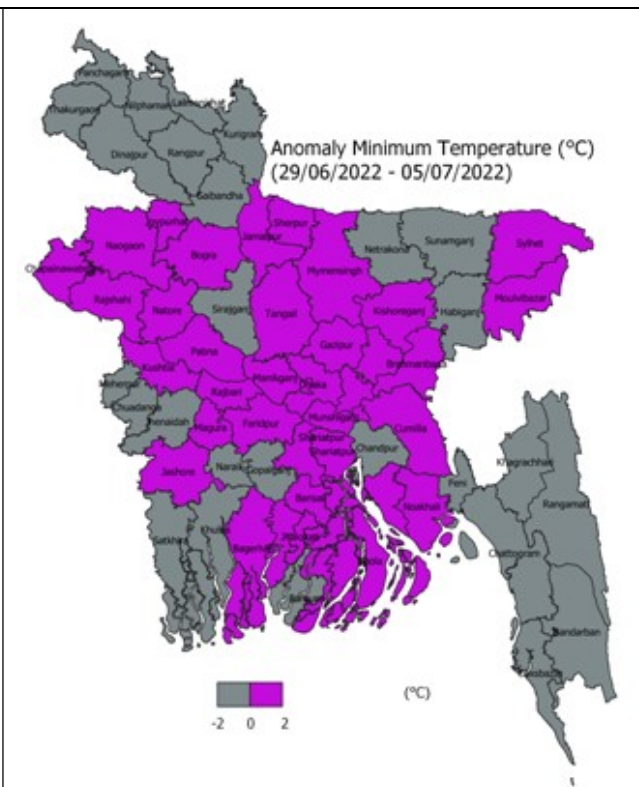

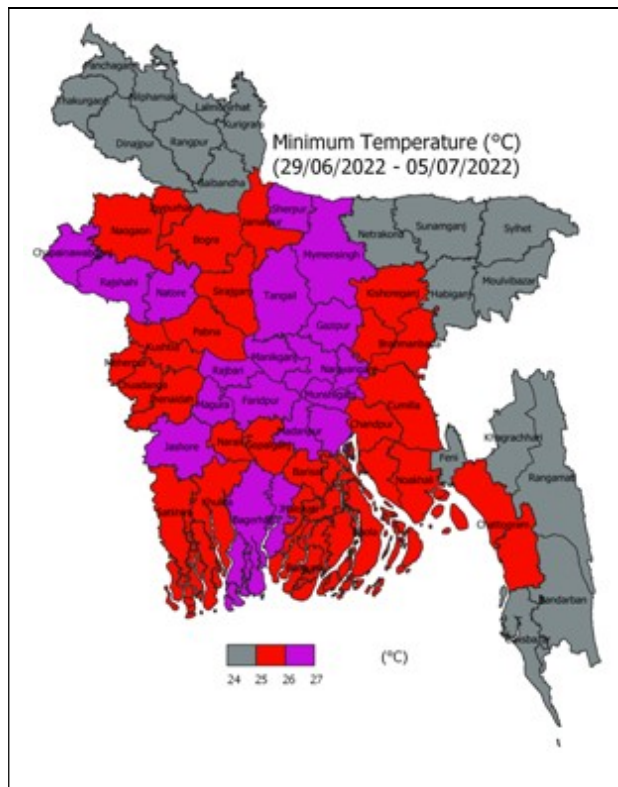

Forecast: Light to moderate rain/thunder showers accompanied by temporary gusty wind is likely to occur at many places over Dhaka, Mymensingh, Khulna, Barishal, Chattogram & Sylhet divisions and at a few places over Rangpur & Rajshahi divisions with moderately heavy to heavy falls at places over the country.

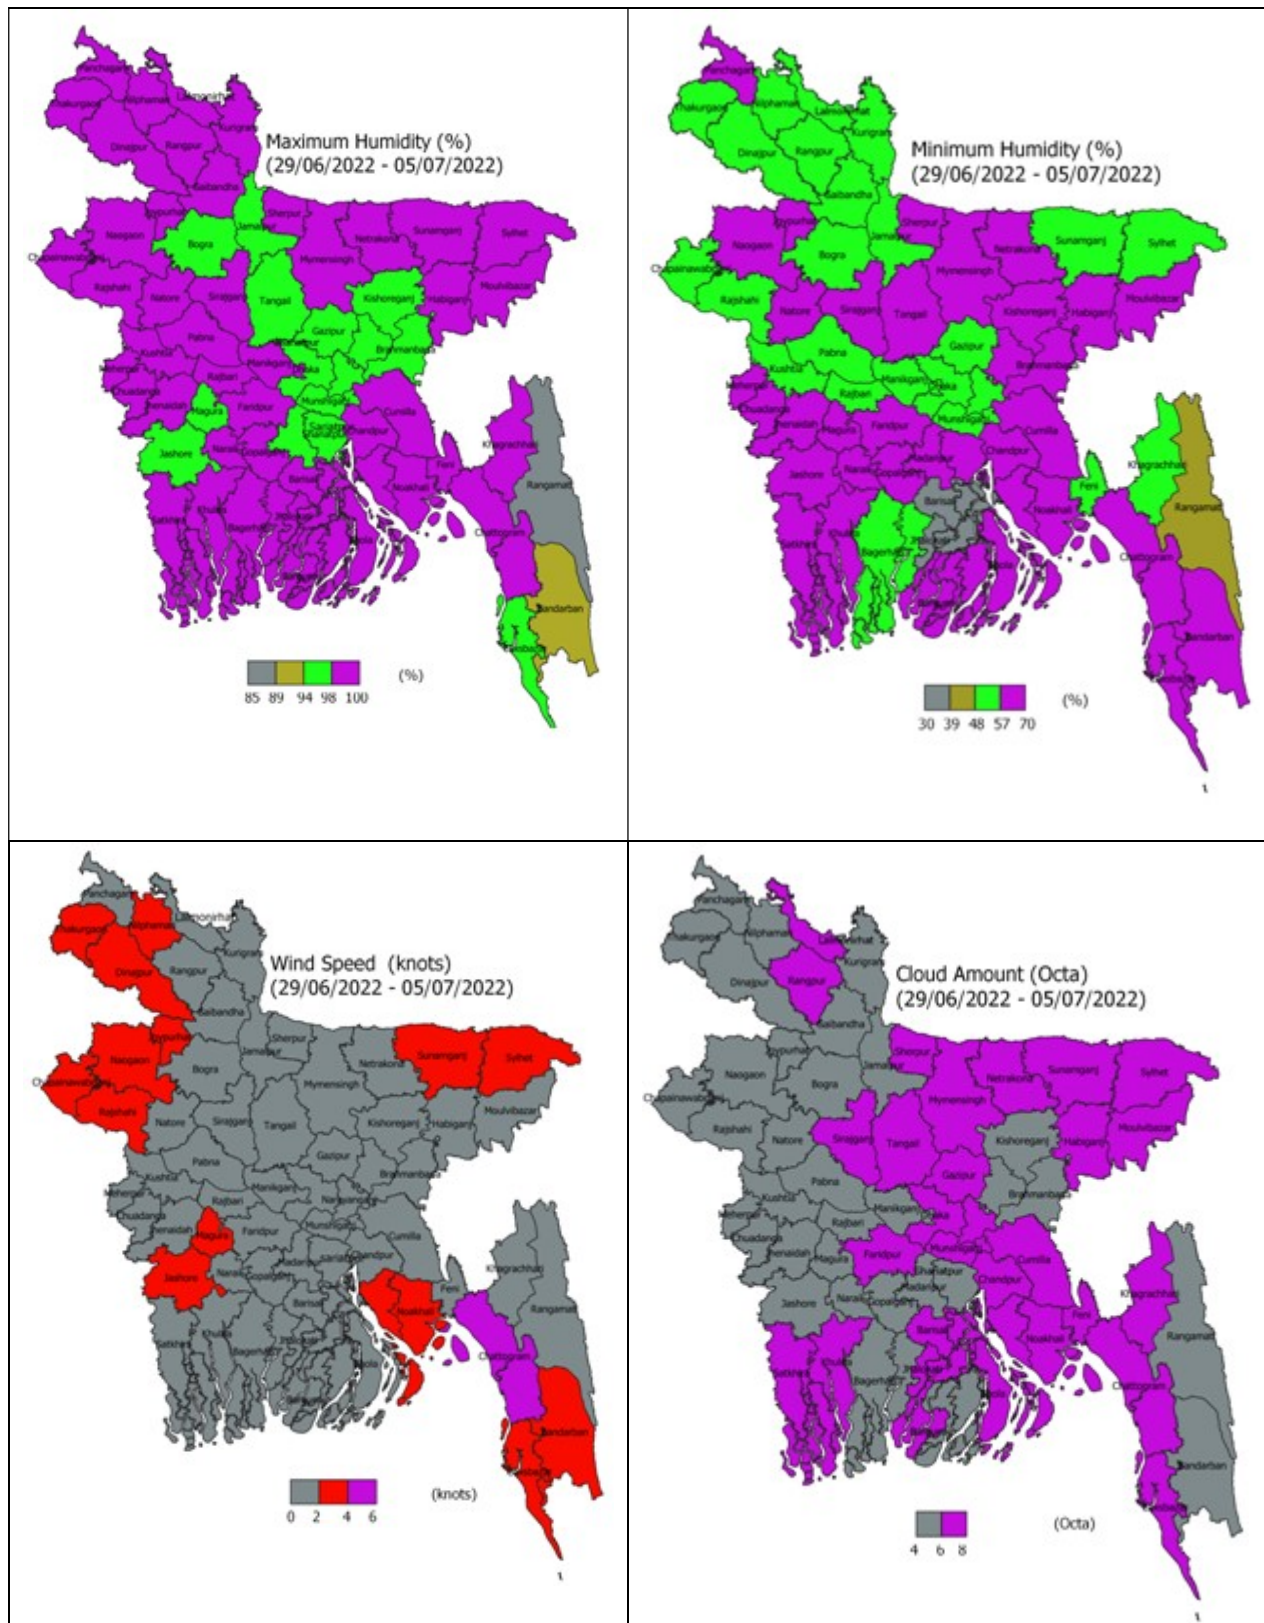

Heat wave: Mild heat wave is sweeping over Rangpur division and the district of Rajshahi and it may abate from some places.

Temperature: Day temperature may fall slightly and night temperature may remain nearly unchanged over the country.

Spatial Distribution of weather parameters for the Week ending 05 July 2022

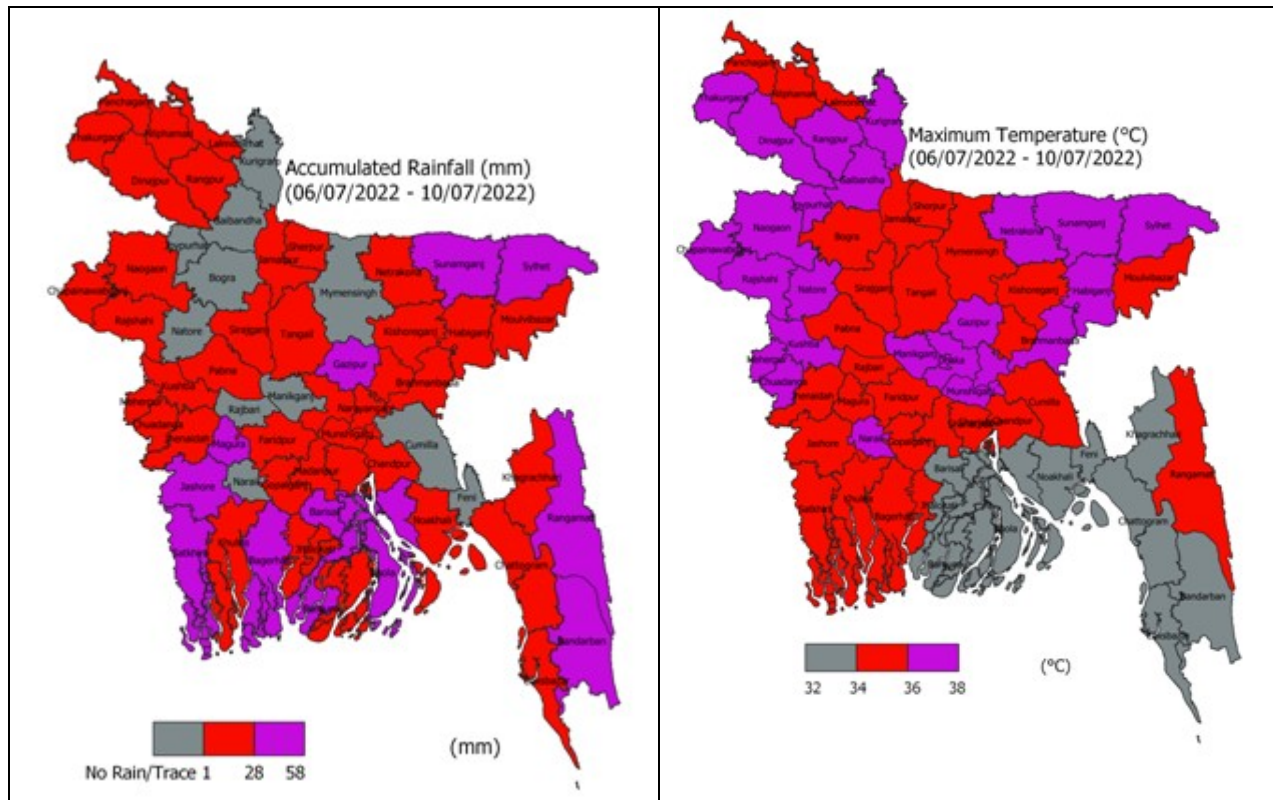

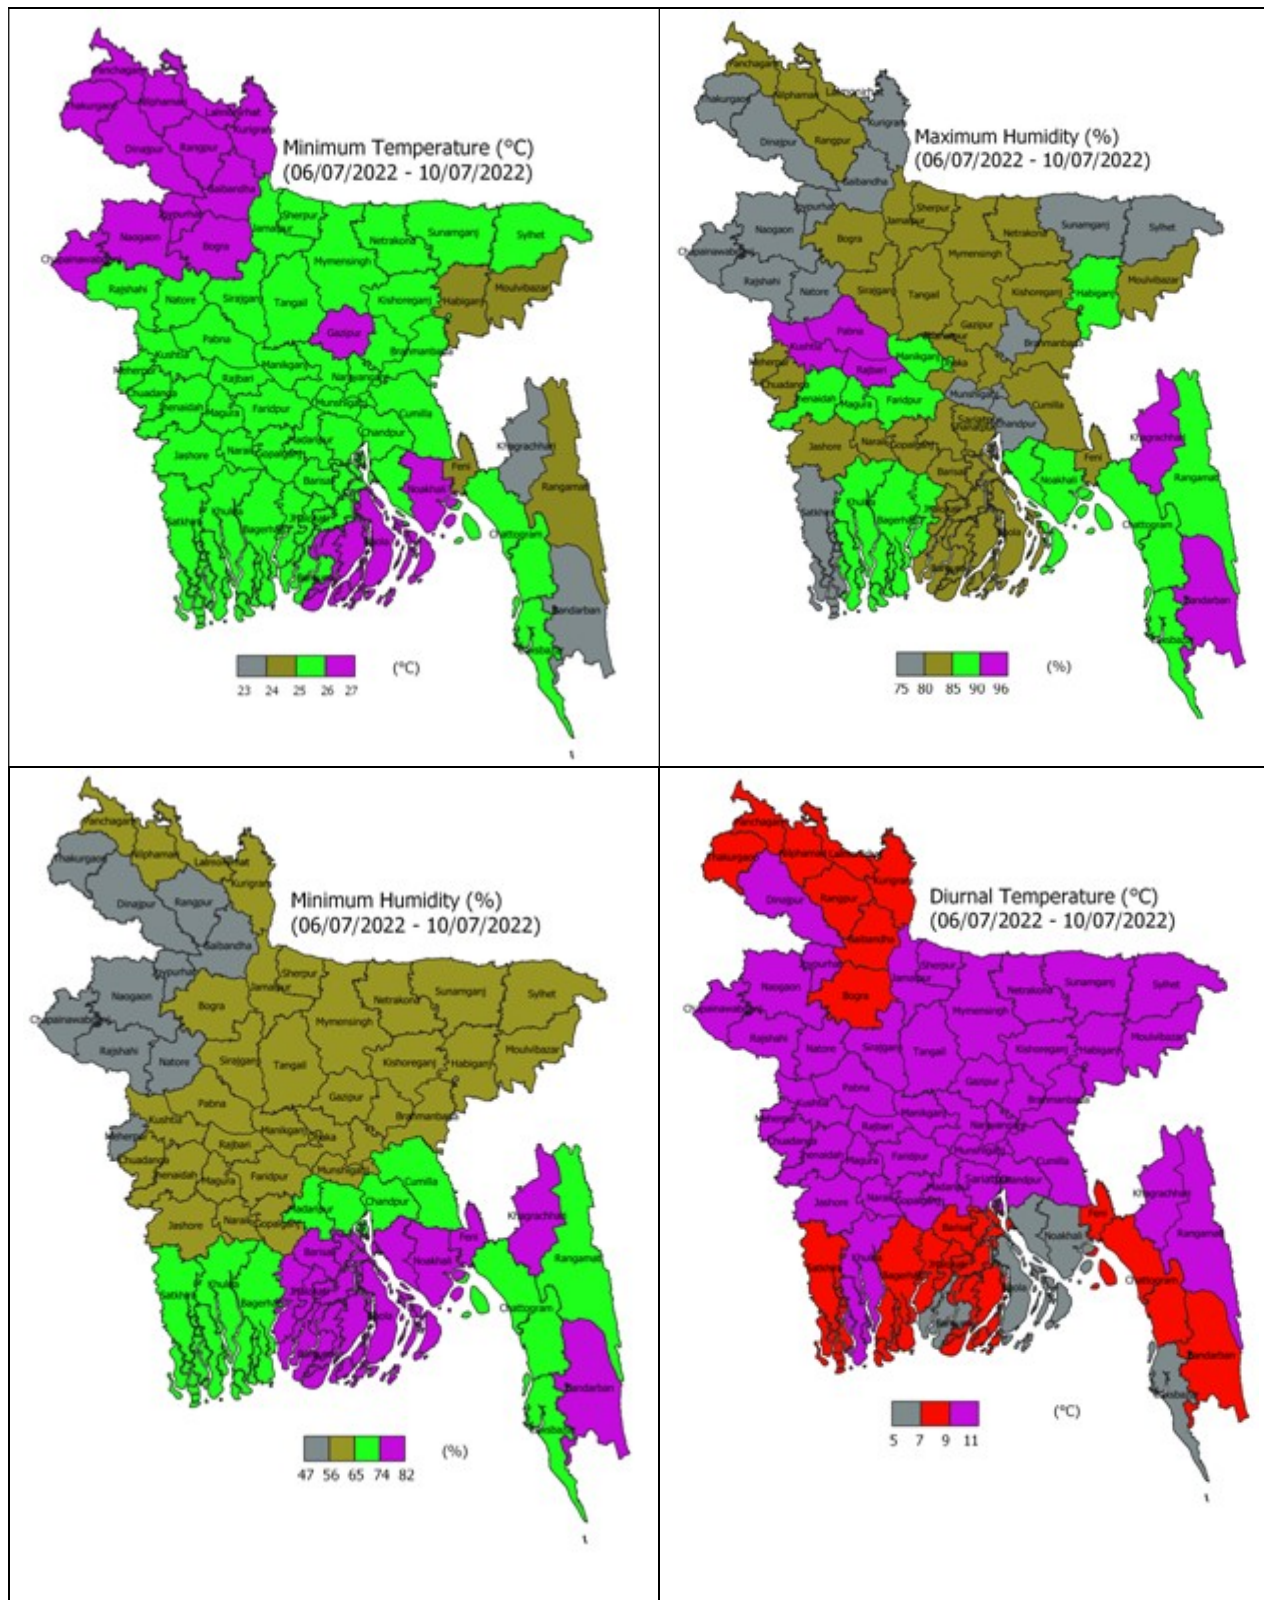

Weather Forecast and Advisory for the Period of 03.07.2022 to 07.07.2022

Bright sunshine hour is likely to be from 4.50 to 5.50 hours per day during this week. Average free water loss is likely to be from 2.50 to 3.50 mm per day during this week.

- Light (04-10 mm/day) to moderate (11-22 mm/day) rain /thunder showers accompanied by temporary gusty/squally wind with lightning flashes is likely to occur at many places (50%-75% area) over Chattogram, Barishal & Sylhet divisions and at a few places over Rangpur, Rajshahi, Mymensingh, Dhaka & Khulna divisions with moderately heavy (23-43 mm/day) to heavy (44- 88 mm/day) falls at isolated places during the period.
- Day temperature may rise slightly and night temperature may remain nearly unchanged over the country during the period.
