There is a chance of light to moderate rainfall in large number (47 districts) in the country, as shown above, during 25-26 February 2020. This amount of rainfall may have impact on standing crops as well as cultivation of crop. In order to reduce the negative impact of this rainfall on the standing crops, following urgent agromet advisories are issued;

1. Avoid application of fertilizer, pesticides, irrigation on the standing crops.
2. Immediately harvest matured vegetables, potato, lentil, mustard & horticultural crops and keep it safe and dry place, otherwise postpone harvesting upto 26<sup>th</sup> February.
3. Special monitoring of blast disease of wheat is required as there is chance of the disease due to likely rainfall along with clouding. If noticed, apply Nativo 75 WG 6 gm/decimal to control the disease
4. Clean the irrigation channel so that there should not be any standing water in the groundnut, maize, mustard, lentil, potato field as at the current stages of the crops are very sensitive to standing water.
5. Arrange for elevated bunding around boro paddy recently transplanted in the main field so that water current may not affect the standing crops.
6. Utilise this rainfall for maintaining of water level in boro paddy which are vegetative to tilling stages.
7. Provide mechanical support to the standing banana, sugarcane and other horticultural crops and also stacking of vegetables.
