**Special Agromet Advisory for Possible Rainfall for December 06–08, 2023**

**Date of issue: 04/12/2023**

According to the Bangladesh Meteorological Department (BMD), light to moderately heavy rainfall is likely to occur in Rangpur, Rajshahi, Mymensingh, Sylhet, and Dhaka divisions for the next three days from December 6–8, 2023. Light to heavy rain is also likely in the Khulna, Barisal, and Chittagong divisions. Based on the analysis of the data received from the Bangladesh Meteorological Department, the following urgent agromet advisory is given to protect the standing crops from the harmful effects of rainfall:

- Keep the land drains clean so that excess water does not accumulate on the land.
- Harvest the mature crops before the rainfall and keep them in a safe place.
- Cover the vegetable seedlings in the seed bed with polythene sheets to protect them from rainfall damage.
- Avoid irrigation, fertilizers, and pesticides.
- Avoid sowing and planting seedlings.
- Keep livestock and poultry housing clean and dry.
