Special agrometeorological advisory for heat waves

(For Bogra, Chapainawabganj, Jaipurhat, Naogaon, Natore, Pabna, Rajshahi, Sirajganj, Dhaka, Gazipur, Kishoreganj, Manikganj, Munshiganj, Narayanganj, Narsingdi, Tangail, Faridpur, Gopalganj, Madaripur, Rajbari, Shariatpur, Bagerhat, Chuadanga, Jessore, Jhinaidah, Khulna, Kushtia, Magura, Meherpur, Narail, Satkhira districts)

Date of Issue: 04/04/2024

According to the information received from the Bangladesh Meteorological Department, mild to moderate heat waves are blowing over the above districts and may continue for the next 04-05 days (April 04 - April 08, 2024). There is no chance of rain during this time. In such cases, the following suggestions are given:

- To protect the rice crop from heat wave damage, keep 5-7 cm of water in the paddy till the grain hardens. At this time, there should be no shortage of water on the land.
- Rice plants may be attacked by neck blast disease during the growing stage in the current weather. Before disease symptoms appear, spray Trooper 8 gm/10 liters of water or Nativo 6 gm/10 liters of water twice in the afternoon on 5 percent soil at an interval of 5 days.
- Provide adequate irrigation at the base of the mango tree. If necessary, water can be sprayed on the branches of the tree.
- Arrange 2 to 3 irrigations on vegetable land as per requirements in the next week, depending on the type of soil.
- Ensure mulching and irrigation to protect fruit and vegetable seedlings from heat wave damage.
